

ZIP CLEAN

- **ZIP CLEAN** was specially developed to clean and remove heavy soiling, shoe marks, spills and stains on laminate and timber flooring. **Zip Clean** will clean & maintain the warmth and beauty of your floor.
- **Zip Clean** is recommended to be used as a weekly floor maintenance.
- Vacuum the floor first to remove any dust particles.
- Spray **Zip Cleaner** to a small area of the floor at a time.
- Use a clean dry **microfibre mop** to remove the residue and dry the floor.
- It is recommended to wash the mop first when new to remove any loose fibres.
- Do not use a sponge mop, as the sponge will wet the floor rather than dry it.
- If streaks or cloudy smear marks appear then this is because the dirt residue on the mop is being re-applied and the mop requires cleaning.
- It is recommended to periodically clean the mop to remove excess residue.
- If using a cloth, first wipe the floor to spread the cleaner and dissolve any stains, then turn the cloth over and wipe the floor a second time using the dry side of the cloth, this will prevent reapplying the dirt residue.
- There will be a noticeable difference between the cleaned area and the unclean area separated by a cloudy residue or smear line.
- All timber and laminate floors are sensitive to moisture and the quantity of water used during cleaning maintenance should be kept to a minimum.
